Taking Lighter Steps

One of our most important values as a business is sustainability and we incorporate this proudly into everything we do; starting with manufacturing all our products in the UK. Our manufacturers are located 10 minutes from our head office to ensure we are doing our best to lower our carbon emissions; ensure the highest quality standard; and to differentiate from our competitors. This means **we do not compromise on quality**, nor sustainability.

Assembly Team

Jonny and Matt, part of our assembly team in Hatfield, are doing a great job of making the assembly line as efficient as possible and have increased our capacity by 150%.

This has allowed our current projects to be ahead of schedule, with a constant level of stock for new clients.

Coming Soon!

We are in the process of developing a new product in partnership with one of our clients, which we will be unveiling soon to become available to the wider market in due course.

We are excited to see the progression and will let you know once we have stock available to demonstrate and ready to purchase.

Cargo Bike Veloboxes

Last year we launched our cargo bike Velobox to manage the growing demand for secure cycle storage for cargo bikes in all sorts of shapes and sizes. Single units can be adapted to store up to 2 long dutch style cargo bikes or two Veloboxes can be joined to create a larger unit.

The adaptation can be reversed at any time. Cargo bikes have risen dramatically in popularity due to their practicality & sustainability, however owners face the issue of where to securely park them. Not anymore.

E-bike Charging

With the popularity of e-bikes going through the roof, we have seen a notable increase in sales of our Electric Velobox. Giving our clients peace of mind that charging and batteries are out of the home.

Exactly as our standard Velobox but with 6 charging points, one per cycle space.
